## Period H<sub>2</sub>S Monitoring Hydrogen Sulfide Offsite Monitors

Below are graphs for offsite locations where hydrogen sulfide (H<sub>2</sub>S) was detected during the current reporting period.

The five stand-alone H<sub>2</sub>S monitoring stations correlate with five previous EPA's Viper monitoring system which includes areas to the north-northeast and south-southwest of the New-Indy Catawba Mill.

Winds were moderate (1.4 to 9.8 miles per hour) and came from the south-southwest for the majority of the day.

See wind rose diagram with aerial map figure for full wind data during this reporting period.

The following location did not detect hydrogen sulfide above 1 part per billion (ppb) during this reporting period: Millstone Creek.

# Treetops- July 11, 2021

# Liberty Hill - July 11, 2021

# Riverchase Estates - July 11, 2021

# Millstone Creek - July 11, 2021

## Period H<sub>2</sub>S Monitoring Hydrogen Sulfide Onsite Monitors

Below are graphs for onsite locations during the current reporting period.

Depending on wind direction, the H<sub>2</sub>S measured at the onsite fence line locations may not exit mill property at reported concentrations. Wind directions from offsite locations, blowing onto mill property, will disperse ambient concentrations to lower levels prior to exiting the plant site.

Winds were moderate (1.4 to 9.8 miles per hour) and came from the south-southwest for the majority of the day.

See wind rose diagram with aerial map figure for full wind data during this reporting period.
