

Air Monitoring Summary Tables

The table below summarizes monitoring data collected using a portable wireless remote monitoring system. All times in Eastern Standard Time (EST).

Period H₂S Monitoring Hydrogen Sulfide Offsite Monitors

Below are graphs for offsite locations where hydrogen sulfide (H₂S) was detected during the current reporting period.

The five stand-alone H₂S monitoring stations correlate with five previous EPA's Viper monitoring system which includes areas to the north-northeast and south-southwest of the New-Indy Catawba Mill.

Winds came from the north-northeast at 1 to 8 mph through the afternoon, then became southeast at 1 to 3 mph during the evening.

See wind rose diagram with aerial map figure for full wind data during this reporting period.

Required quarterly independent audits were performed on Catawba Headstart (9:00 – 14:00 EST), Liberty Hill (12:00 – 19:00 EST), and Riverchase Estates (12:00 – 19:00 EST).

Treetops - 9/16/2021

Liberty Hill - 9/16/2021

Riverchase Estates - 9/16/2021

Millstone Creek - 9/16/2021

Period H₂S Monitoring Hydrogen Sulfide Onsite Monitors

Below are graphs for onsite locations during the current reporting period.

Depending on wind direction, the H₂S measured at the onsite fence line locations may not exit mill property at reported concentrations. Wind directions from offsite locations, blowing onto mill property, will disperse ambient concentrations to lower levels prior to exiting the plant site.

Winds came from the north-northeast at 1 to 8 mph through the afternoon, then became southeast at 1 to 3 mph during the evening.

See wind rose diagram with aerial map figure for full wind data during this reporting period.

Required quarterly independent audits were performed on Station 1 (10:00 – 13:00 EST) and Station 2 (14:00 – 16:00 EST).

Station3 - 9/16/2021
