Station 1 Wind Rose – Shows the direction the wind is coming from, the monitoring station being at the center of the rose.

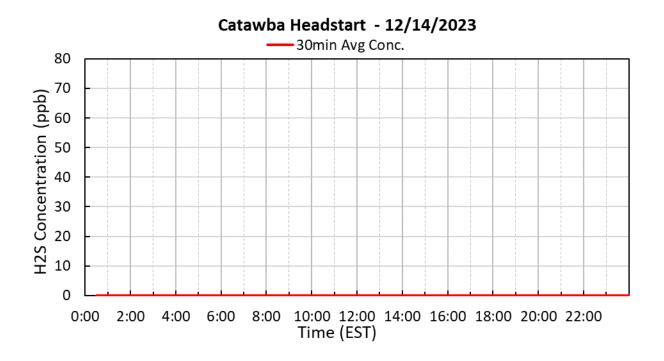

## Period H<sub>2</sub>S Monitoring Hydrogen Sulfide Offsite Monitors

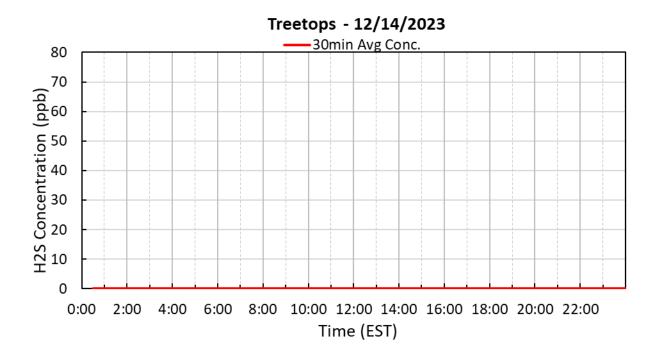

Below are graphs for offsite locations where hydrogen sulfide  $(H_2S)$  was detected during the current reporting period.

The five stand-alone  $H_2S$  monitoring stations correlate with five previous EPA's Viper monitoring system which includes areas to the north-northeast and south-southwest of the New-Indy Catawba Mill.

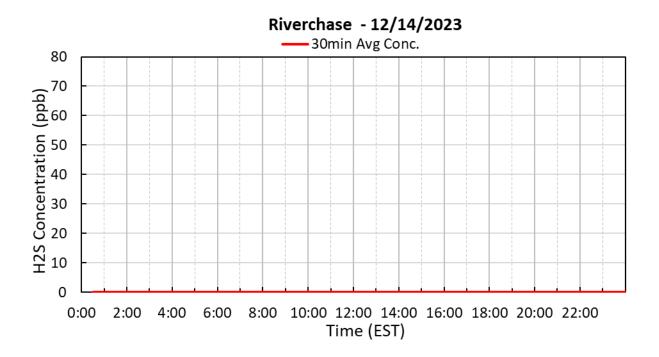

Winds were coming from a variable direction throughout the day at 1 to 10 mph.

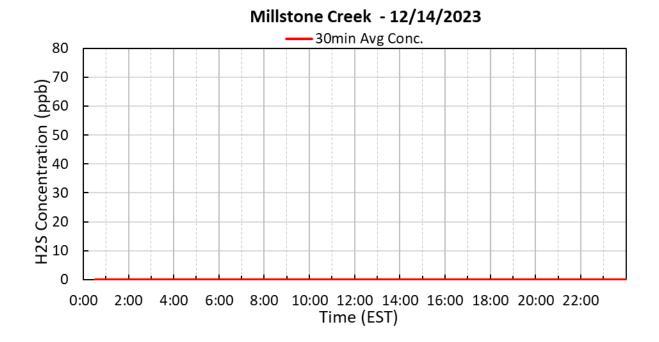

See wind rose diagram with aerial map figure for full wind data during this reporting period.

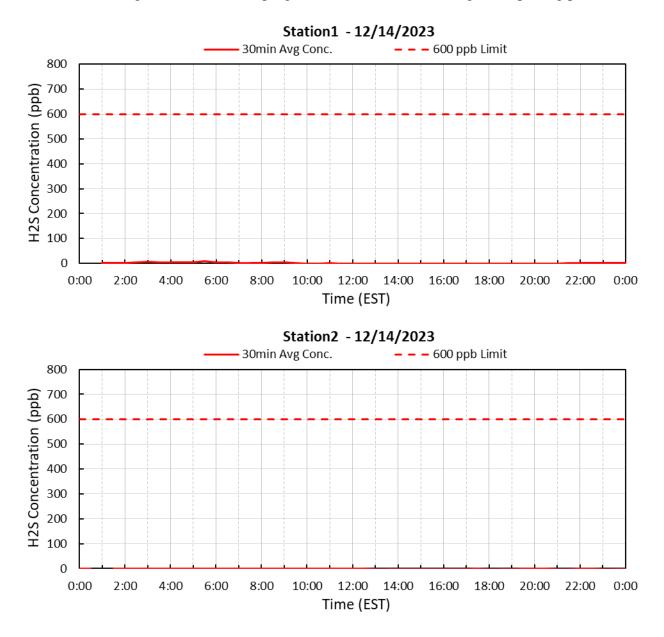

## Period H<sub>2</sub>S Monitoring Hydrogen Sulfide Onsite Monitors

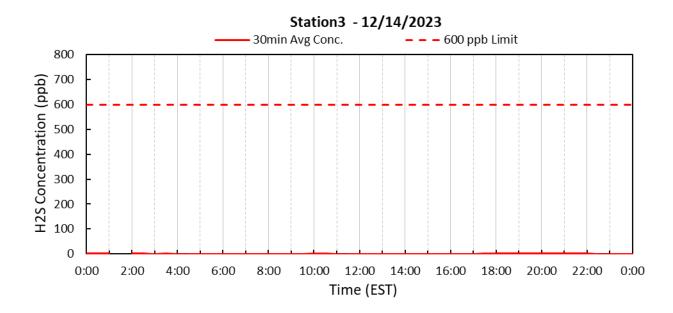

Below are graphs for onsite locations during the current reporting period.

Depending on wind direction, the  $H_2S$  measured at the onsite fence line locations may not exit the mill property at reported concentrations. Wind directions from offsite locations, blowing onto mill property, will disperse ambient concentrations to lower levels prior to exiting the plant site.

Winds were coming from a variable direction throughout the day at 1 to 10 mph.

See wind rose diagram with aerial map figure for full wind data during this reporting period.
