^b The 24-hr average at Station 1 is not represented by the full 24-hr period; a total of 8 30-minute averages are missing from the reported period due to a routine quarterly audit performed at this location.

^c The 24-hr average at Station 2 is not represented by the full 24-hr period; a total of 10 30-minute averages are missing from the reported period due to a routine quarterly audit performed at this location.

Station 1 Wind Rose – Shows the direction the wind is coming from, the monitoring station being at the center of the rose.

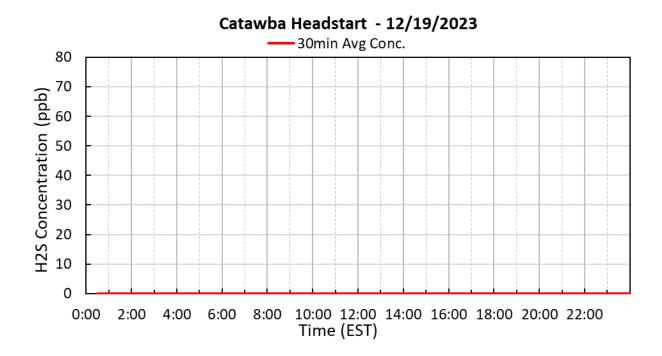

Period H₂S Monitoring Hydrogen Sulfide Offsite Monitors

Below are graphs for offsite locations where hydrogen sulfide (H₂S) was detected during the current reporting period.

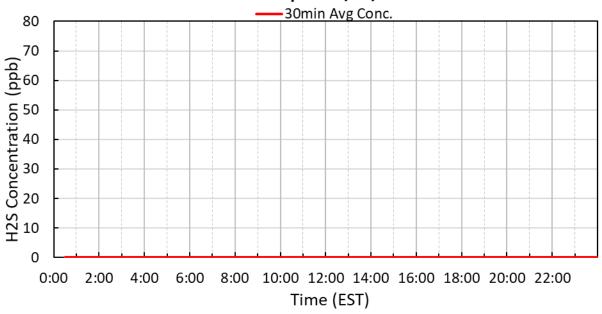

The five stand-alone H₂S monitoring stations correlate with five previous EPA's Viper monitoring system which includes areas to the north-northeast and south-southwest of the New-Indy Catawba Mill.

Winds were predominantly coming from the northwest and north-northwest direction throughout the day at 1 to 14 mph.

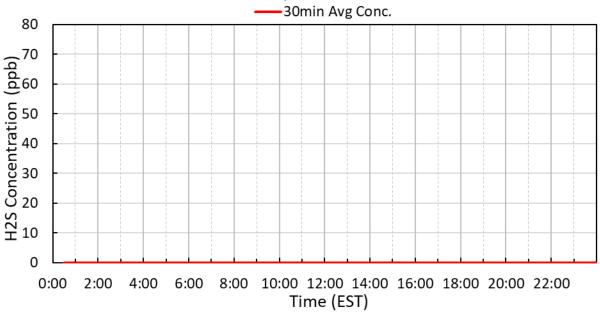

See wind rose diagram with aerial map figure for full wind data during this reporting period.

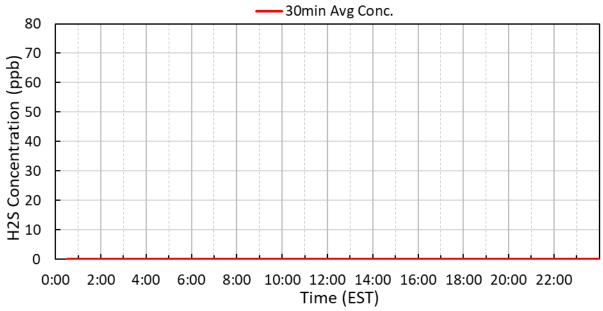

Treetops - 12/19/2023

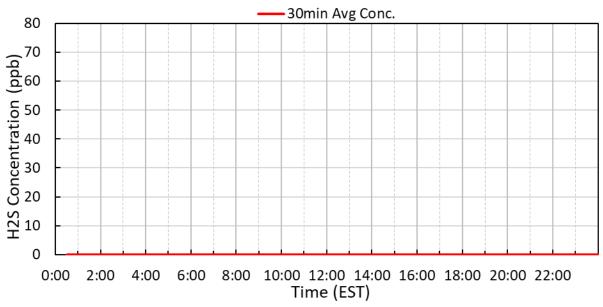

Liberty Hill - 12/19/2023

Riverchase - 12/19/2023

Millstone Creek - 12/19/2023

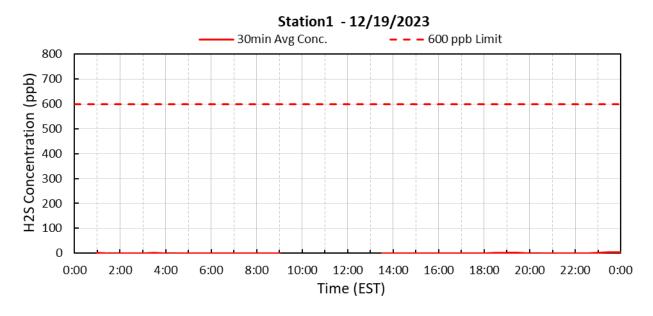

Period H₂S Monitoring Hydrogen Sulfide Onsite Monitors

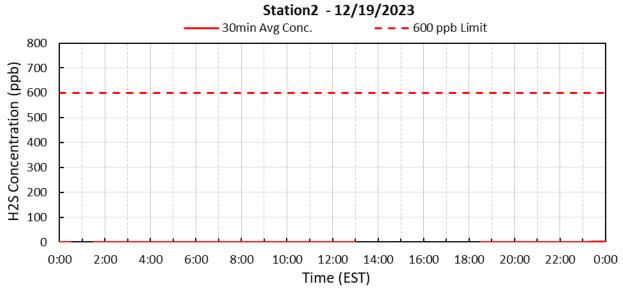

Below are graphs for onsite locations during the current reporting period.

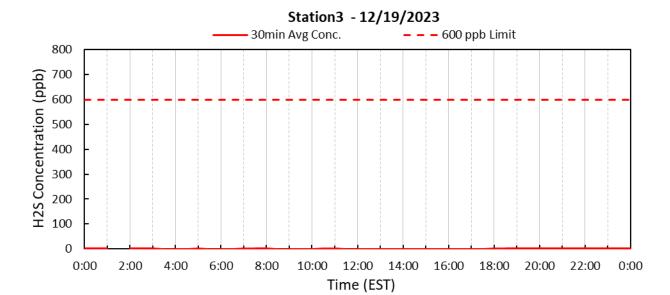

Depending on wind direction, the H_2S measured at the onsite fence line locations may not exit the mill property at reported concentrations. Wind directions from offsite locations, blowing onto mill property, will disperse ambient concentrations to lower levels prior to exiting the plant site.

Winds were predominantly coming from the northwest and north-northwest direction throughout the day at 1 to 14 mph.

See wind rose diagram with aerial map figure for full wind data during this reporting period.
