^a Based on 30-minute averages.

^b The 24-hour H₂S average at Station 2 is not represented by the full 24-hr period; a total of 11 30-minute averages are missing due to multi-point verification and calibration work performed at this location.

^c The 24-hour H₂S average at Station 3 from the start of the sampling period to the end of the sampling period is represented by the redundant unit data due to failed overnight QC check on the primary unit.

Period H₂S Monitoring Hydrogen Sulfide Offsite Monitors

Below are graphs for offsite locations where hydrogen sulfide (H₂S) was detected during the current reporting period.

The five stand-alone H₂S monitoring stations correlate with five previous EPA's Viper monitoring system which includes areas to the north-northeast and south-southwest of the New-Indy Catawba Mill.

Winds were predominantly coming from the south, south-southwest, and southwest direction throughout the day at 1 to 6 mph.

See wind rose diagram with aerial map figure for full wind data during this reporting period.

Treetops - 3/13/2024

Liberty Hill - 3/13/2024

Riverchase - 3/13/2024

Millstone Creek - 3/13/2024

Period H₂S Monitoring Hydrogen Sulfide Onsite Monitors

Below are graphs for onsite locations during the current reporting period.

Depending on wind direction, the H₂S measured at the onsite fence line locations may not exit the mill property at reported concentrations. Wind directions from offsite locations, blowing onto mill property, will disperse ambient concentrations to lower levels prior to exiting the plant site.

Winds were predominantly coming from the south, south-southwest, and southwest direction throughout the day at 1 to 6 mph.

See wind rose diagram with aerial map figure for full wind data during this reporting period.
